EXTRACTION

EXTRACTION

CONNECTIVITY

Elica leads the way in appliance connectivity. We can control our Wi-Fi enabled products with the Elica app or through voice control assistants. To turn it on or off, adjust the extraction speed or intensity and the colour of the light, simply click the App or ask Alexis. The Elica App can also monitor the status of the hood and notify you of any cleaning operations that are required or filters that need replacing.

SPECIAL MATERIAL

In the quest for beautiful and eye-catching products materials play a key role. Whether selected to make the product blend in or stand out they should always be durable and easy to maintain. They are fundamental in the process of innovation and Elica selects materials in which practicality and aesthetic impact are combined in a perfect balance. The wide selection of finishes available offers choice to suit every setting.

BACK ASPIRATION

Hoods with this additional outlet offer greater installation flexibility. The aspiration function can be done by connecting the hood to ducting directly through the rear wall, avoiding the need for any visible ducting.

TOTAL INTEGRATION

The minimalist look is becoming increasingly popular in kitchens. The Total Integration products have been designed to be seamlessly integrated into the kitchen preserving the cleanest of lines.

SUPER EASY INSTALLATION

With the exclusive Elica Super Easy system, installation can be done in safety in just a few steps. After the hood is locked in place it can be finely adjusted so it is perfectly flush with the ceiling.

COMFORT SILENCE

With the widespread tendency to design kitchens as part of an open-plan living area, it has become increasingly important to be able to rely on hoods with greater power but which are also quieter, so they do not intrude on the surroundings. With Elica's Comfort Silence hoods, the sound level even at maximum extraction speed does not disturb or interfere with normal conversation.

REGENERATABLE FILTER

The traditional charcoal odour filters used when a hood is installed in recirculating mode must be replaced every 3 to 6 months. Elica has designed the innovative Regeneratable odour filter which can be regenerated and lasts up to three years. Just wash it with hot water and neutral soap or in the dishwasher at 65° and dry it in the oven at 100° for 10 minutes every 2 months and it will last for up to 3 years maintaining its original efficiency level of approximately 60%.

HIGH PERFORMANCE REGENERATABLE FILTER

The High Performance Regeneratable Filter has been developed by Elica for maximum performance. This filter guarantees a filtering efficiency of more than 80%, as compared to the market average of 60%. These filters can be regenerated in the same way as standard long life filters and also last for up to 3 years. These high performance filters are the ideal solution if you like cooking dishes which take a long time to cook..

CERAMIC HP FILTER

Elica's latest filter for recirculating versions of NikolaTesla has been designed for the highest performance and the longest life. It's performance is maintained by simply regenerating in an oven and it lasts for up to 5 years making it the most environmentally friendly as well as cost effective filter available.

MULTI-D CAPTURE

Elica's radical new Multi-D capture design greatly increases the speed of the air entering the hood from all sides which significantly improves fume capture of vertical and angled hoods.

DIM LIGHT

The level of illumination can be adjusted at any time to adapt to the time of day or to what's going on in the home. The dimmable LEDs always create the right atmosphere and reduce energy consumption..

TUNE WHITE

The ability to choose the preferred shade of light always creates the right atmosphere. Our range starts from a very warm tone, 2400°K, to experience intimate and convivial moments, up to a cool daylight 5000°K, ideal during the preparation of food. With Tune White, you can also align the colour of the light from the hood with the rest of the lights in the room for uniform lighting.

AIRMATIC

Once the Airmatic function is activated, the product's intelligent sensor system detects the quantity and above all the quality of the fumes produced and sets the most suitable aspiration power.
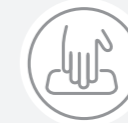

EASY MAINTENANCE

Keeping your hood clean not only ensures good hygiene in the kitchen but also a long life. Elica products are designed with materials and finishes for easy maintenance. All the components, such as the grease and odour filters, can be easily accessed and removed so they can be cleaned and if necessary replaced.

AUTOCAPTURE

When it is important to focus only on cooking operations, you can activate this function. The aspiration system adjusts automatically to the number and power of the cooking zones you are using.

COOKING

MULTI FLEXI SPACE

With the Multi Flex Space design, you have more space available both in length and width when using large pots. You can slide the pans from one burner to another without lifting them.

DUAL BURNER

The Dual Burner, is ideal for small or large pans. The innovative burner features a double crown with independent ignition of each burner, so perfect for both a small coffee pot or a large pan.

BRIDGE ZONE

This function lets your merge 2 adjacent cooking zones, maintaining a uniform, constant temperature, even when using very large pans.

CHILD LOCK

The Child Lock function prevents the hob's cooking zones or extraction being turned on accidentally.

TEMPERATURE MANAGER

Your dishes will always be cooked at the perfect temperature when you use this function that lets you set the hob with 3 programmes (42, 72 or 92 degrees). The temperature settings have been optimised for both very delicate cooking (mousses, sauces, keeping dishes warm) as well as cooking at high power (boiling).

POWER LIMITATION

When you do not have a powerful enough electricity supply available you can set the Power Limitation during installation to limit the maximum power absorbed by your hob.

COOKING

TIMER

Forget about cooking times by turning on the timer. Just set the minutes and start the countdown. At the end, the cooking zone will automatically switch off and a beeper will sound. You can set independent timers on more than one zone at the same time..

KEEP WARM

The Keep Warm function keeps dishes that have just been cooked warm or re-heats a dish that has gone cold. This is useful if you cook at one time but want to eat at a different time. The Keep Warm function can be enabled for any zone..

STOP&GO

If you are interrupted whilst cooking, or you have to go into another room, or you just want a break, with just a single touch of the Stop&Go button you can switch off all the cooking zones and walk away with complete confidence and safety.

PAUSE & RECALL

With Pause & Recall, you can switch off all the cooking areas with one single gesture and then, restart them with a simple press of a button at the same previously set power.

POT DETECTOR

With Pot Detector, the hob automatically detects the presence of the pot on the cooking area and provides heat only when it is correctly positioned

DUCT SIZE

It is essential that the correct (or larger) size of ducting is used otherwise the performance will be significantly affected and the noise increased. Increasing the length and the number of bends in ducting will significantly reduce the airflow.

MINIMUM HEIGHT – GAS HOB

The minimum height above the top of the pan supports of a gas hob that the hood can be installed. This is subject to the installation instructions produced by the hob manufacturer which should be checked before any design is finalised.

MINIMUM HEIGHT – ELECTRIC HOB

The minimum height above the top of the pan supports of an electric hob that the hood can be installed. This is subject to the installation instructions produced by the hob manufacturer which should be checked before any design is finalised.

NIKOLATESLA

OPERATION AND MAIN ADVANTAGES

Quality of air has always been key to Elica's products. NikolaTesla extractor-hobs incorporate the very best technology to ensure high-performance and the best extraction of fumes and of odours.

HIGHEST EXTRACTION SPEED

All the NikolaTesla models have the highest extraction speed on the market at 5.1 m/s so they can capture all the fumes and odours as they start to rise for the best efficiency and performance available.

MORE SPACE FOR DRAWERS

The product has been designed to optimise the internal space of the cabinet. The adjustable outlet duct which sits flush at the rear of the cabinet makes room for deeper and more spacious drawers to store food or kitchen utensils.

SMART SENSORS AND THAT'S ALL YOU NEED TO KNOW

The innovative Airmatic function involves the use of smart sensors which are able to detect the quantity and quality of the fumes produced and to set the most suitable extraction power accordingly.

SELF-ADJUSTING EXTRACTION

With Autocapture, you can concentrate on your recipe and leave the hob to automatically adjust the extraction speed based on the number and power of the cooking zones being used.

FAST AND EASY TO CLEAN

The smooth, seamless surface of NikolaTesla is one of the innovative features of the new generation of Elica extraction hobs. The seamless ceramic glass is an elegant design detail that also makes short work of cleaning.

PRACTICAL MAINTENANCE

Beauty is combined with practicality when it comes to maintenance as well. The system, patented by Elica, allows the grease filters and the ceramic odour filters used by recirculating models to be removed from above. The large opening with its stylish cover means the spillage compartment can be washed easily and safely.

INTUITIVE AND USER-FRIENDLY INTERFACE

Elica extractor hobs feature a simple and intuitive interface to allow you to enjoy the pleasure of cooking every day. The touch control panel allows the cooking areas and hood to be controlled separately and, in standby mode, it becomes totally invisible. Controlling cooking has never been so easy and convenient.

IMPROVED ODOUR FILTERING CAPABILITY

The recirculating models in the NikolaTesla range feature a ceramic filter with a very high odour purification efficacy of over 82% compared to a market average of 60%. It can be regenerated for up to 3 years simply by putting it in the oven at 200°C for 45 minutes every 2 to 3 months which makes it both environmentally friendly and very cost effective.

NIKOLATESLA SWITCH

DESIGN FABRIZIO CRISÀ

83 x 51x 21 cm
Duct-out / Re-circulating
Black glass, white glass

An elegant disk in black or white glass conceals the heart of the extraction unit - activate with a simple touch. The Direct Slider interface allows the various cooking and extraction areas to be controlled simply and intuitively.

NIKOLATESLA LIBRA

DESIGN FABRIZIO CRISÀ

THE FIRST HOB WITH INTEGRATED SCALES

With NikolaTesla libra, following the steps of each recipe has never been simpler and faster thanks to the integrated scales, always within easy reach.

Products can be weighed directly in the pan, at any temperature at any time while cooking.

FUNCTIONS

√ **WEIGHT RESET**
the pan and its contents can be weighed by progressively resetting the value in order to add other ingredients and know the final overall weight

√ **TARE FUNCTION**
allows multiple ingredients to be weighed one at a time, starting from zero each time

√ **HOLD FUNCTION**
stores the selected weight

√ **SELECT UNIT OF MEASURE**

The NikolaTesla Libra interface is extremely intuitive to use thanks to a single direct slider, which controls both cooking and extraction functions.

The scale has a dedicated user interface, allowing it to be used even with the product completely turned off. Simply rest the pot on top to activate the weighing function.

Nikola Tesla has been designed with the greatest flexibility to suit a huge variety of kitchens. The recirculating version comes complete with every component usually needed for installation including the unique chrome outlet grill for the plinth. For the duct out version a wide range of ducting is available to suit all installation requirements.

Nikola Tesla can be installed on the counter top or flush fitted with the counter top.

EXCELLENCE IN SMALL SPACES

Small spaces are becoming more and more widespread in homes now which is why multi-functional products, capable of optimising space, are excellent solutions.

Designed to meet the exacting needs of those unwilling to renounce excellence even in small spaces, NikolaTesla Fit is the first induction hob with integrated extraction that can also be installed in 60-cm wide base units with an overall width area of 60 or 72 cm.

ELEGANT AND FUNCTIONAL DESIGN

Rotate the central panel to activate the extraction in a perfect combination of style, comfort and functionality. The compact dimensions and shape have been designed to leave space in the cabinet and total freedom of movement on the hob with pans of any kind. The heart of this efficient and silent extraction unit is totally concealed by the glass top which covers the product discretely and elegantly.

SIMPLE CLEANING AND MAINTENANCE

NikolaTesla Fit is designed to be really easy to clean and maintain. The fully linear ceramic glass surface makes cleaning very quick and easy. The central aesthetic element can be removed and washed. It is also the access point for extracting the filters and carrying out maintenance. The inner compartment can be accessed in complete safety and any excess liquid can be removed thanks to a special drain valve.

MAJESTIC NO DRIP

DESIGN FABRIZIO CRISÀ

60 - 90 cm
Duct-out / Re-circulating
Black glass + stainless steel

NO DRIP – Condensation can be a problem in kitchens with induction
hobs. As these hobs only heat the pans there is no rising warmth to
warm the glass of any cooker hoods so condensation can form. With
the NO DRIP function the glass panel is warmed (just as in a cars rear
windscreen) preventing condensation and any condensation on the
internal components is collected in a removeable drip tray.

HAIKU

DESIGN FABRIZIO CRISÀ

SHIFT 3238 SYSTEM

FLUSH FIT

Elica is the first to offer a range of cooker hoods that have an adjustable depth system - SHIFT 3238 - so they can be installed flush with a wide range of units from 32cm to 38cm deep. The unique wall mounted bracket is simple to install and easy to adjust to the millimetre. With sHiFT 3238 design limitations disappear and solutions multiply.

DESIGN FABRIZIO CRISÀ

32 - 60 - 90 - 120 cm
Duct-out / Re-circulating
Black glass, white Krion, stainless steel

As well as SHIFT 3238 Haiku can be installed in duct-out
or re-circulating mode without the upper chimney section
giving a minimum height of only 680mm which is really
useful in kitchens with low ceilings.

Duct-out / Re-circulating
Black glass, white Krion, stainless steel

KRION® is a high performance material that's warm to the touch
but otherwise similar to natural stone. It is comprised of two
thirds natural minerals and high-resistance resins. This makes it
very attractive, antibacterial and extremely durable.

CUT FOR INSTALLATION

TOTAL INSTALLATION FREEDOM

GETUP is designed to be installed discretely into any style of kitchen with the maximum freedom for installation and taking up a minimum amount of space - all thanks to its compact size and the flexibility of positioning the extraction unit.

This flexibility means the motor can be positioned on either side of the unit with the outlet in one of four directions or remotely -up to 3 metres away - which frees up even more space below your hob as well as keeping the noise level where you are working to an absolute minimum.

ORIGINAL FINISHES

Materials have always been one of the fundamental elements for Elica in the innovation process, resulting in statement solutions, in line with latest design trends. We have produced GETUP with 4 finishes.

The peerless black finish is interpreted with a combination of black glass and details in soft touch paint while the classic solution in stainless steel showcases its timeless elegance.

The cast-iron effect is a brand-new addition. Highlighted by a titanium trim, it blends in perfectly with the latest kitchen styles and the aesthetics of gas hobs with their cast iron pan supports and brass burners. The "naked" model allows you to cover the upper panel with any material, even the same one as the worktop, making GETUP really customisable product.

A high performance hood that blends perfectly with minimalist design and offers excellent value for money. The patented installation system allows the hood to be secured to the cabinet with only 2 screws from below, in less than one minute. Remote motor versions for in-line or external installation.

GOOD TO KNOW

For those of you, who like to keep up with the latest trends and are not just looking for an attractive finish, but also want detailed information about functionality, we have created a section in which you can source all the details on accessories, useful information, advice on how to choose your hood, warranties and energy labels.

LEARN MORE ABOUT WEIGHT

In kitchen designs featuring an island, suspended or ceiling hood (built into a false ceiling), it is important that the plasterboard structure is able to support the weight of the hood itself.

The weight varies depending on the model and overall dimensions, and the following table is a useful aid in developing a suitable support without needing to forgo a practical and stylish open space.

	WEIGHT			WEIGHT
ADÉLE ISLAND	27,4 Kg		JUNO	13,40 Kg
BELLE	18,85 Kg		JUNO URBAN	13,50 Kg
BIO ISLAND	32,80 Kg		LULLABY (DUCT-OUT)	42,00 Kg
CELESTIAL	16,70 Kg		LULLABY (FILTERING)	50,00 Kg
CLOUD SEVEN (DUCT-OUT)	17,70 Kg		METEORITE ISLAND	40,40 Kg
CLOUD SEVEN (FILTERING)	19,50 Kg		PIX	16,40 Kg
DIVA	19,25 Kg		PEARL	33,80 Kg
EASY	11,65 Kg		REEF A ISLAND	26,20 Kg
FLOW	14,50 Kg		SIENNA	8,30 Kg
GALAXY ISLAND	24,50 Kg		SIENNA URBAN	7,50 Kg
HAIKU ISLAND (32 cm)	33,70 Kg		SHINING	19,00 Kg
HAIKU ISLAND (120 cm)	46,30 Kg		SKYDOME (H16)	25,20 Kg
HAIKU ISLAND (180 cm)	55,10 Kg		SKYDOME (H30)	27,20 Kg
HILIGHT-GLS / HILIGHT-X (H16)	31,00 Kg		SKYDOME (NO MOTOR)	21,70 Kg
HILIGHT-GLS / HILIGHT-X (H30)	34,10 Kg		SUMMILUX	22,20 Kg
HILIGHT-GLS / HILIGHT-X (NO MOTOR)	24,80 Kg		THIN ISLAND	34,20 Kg
IKONA LIGHT	15,00 Kg		TRIBE A ISLAND	28,20 Kg
ILLUSION (H16)	23,00 Kg		TUBE PRO ISLAND	26,35 Kg
ILLUSION (H30)	23,70 Kg		TANDEM	26,40 Kg
ILLUSION (NO MOTOR)	19,50 Kg		YIN	66,00 Kg
INTERSTELLAR	27,10 Kg

GREASE FILTERS

Aluminium Grease Filter
KIT0010805

Layered aluminum grease filter (GFA). This filter is the most common on the market, also because, thanks to its size it can be easily washed by hand, or in the dishwasher.

Professional Baffle Filter
KIT0010804

All steel grease filter that gives the product a typical commercial hood look. Thanks to the multiple steel layers, this filter has a high grease capturing capacity.
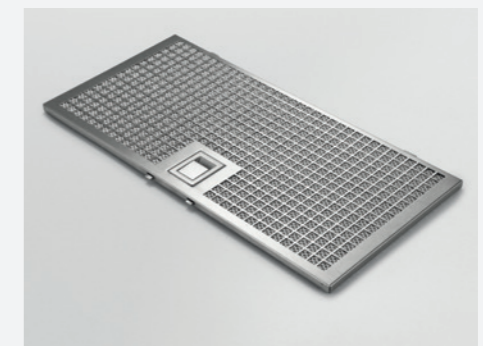

Professional Stainless Steel Grease Filters
KIT0010806
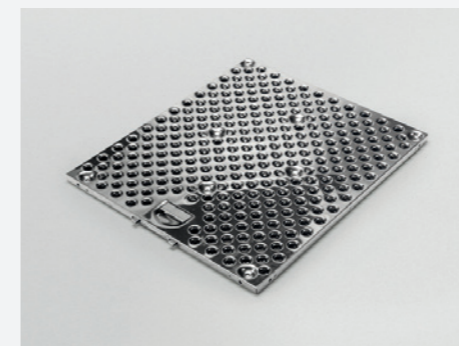

Grease filter with the first layer in steel and a microperforated back metal sheet, easily washable and with high grease capturing capacity.

Stainless Steel Grease Filter

Layered aluminum grease filter (GFI). The first aesthetic steel layer gives it a professional look, while still maintaining its easy washability.

ODOUR FILTERS

Charcoal Filter

The traditional odour filter, made up of a mix of activated carbons, looses its efficiency through use and has an average life of 3-6 months.

Standard and High Performance Regeneratable Filters

These filters can be regenerated in the same way as the revolution filter. The standard filter has an efficiency of up to 60% and the high performance up to 80%.

Revolution Filter

This odour filter with very high efficiency level >82% is able to be regenerated and is capable of lasting up to 3 years in comparison to standard filters which have a typical effective life of 6 months. To maintain such characteristics, the filter must be washed every 2 to 3 months with hot water and mild soap, or in the dishwasher at 65°C. and dried in the oven for 10 minutes at 100°C.

Ceramic Filter

The modular ceramic filter gives very high odour absorption efficiency and has very high mechanical strength. As a result it can be thermally regenerated in the oven every 2 to3 months at 200°C for 45 minutes for up to 5 years.

THE IMPORTANCE OF THE HOOD IN THE KITCHEN

The extractor hood is an essential tool in the kitchen, helping to improve air quality and maintain a healthy environment. Combustion fumes, unpleasant smells, odours and cooking vapours are unpleasant and annoying and can also damage furniture and wall coverings. it is, therefore, important to ensure effective, easy-to-use and quiet extraction. The hood is now used not only as a basic **extractor unit**, but also as a **light source** to illuminate just the hob or more generally and can also be a focal design point in the kitchen, The numerous models and finishes available allow you to choose the perfect hood for the design of your kitchen: whether it is minimal and linear or a statement, signature piece, the hood today has become a central element in our kitchens.

WHICH HOOD SHOULD I CHOOSE?
It can be difficult to find the best choice among the many models on offer. To find the hood that best suits your space, personal taste and lifestyle, you should consider several key factors: correct extraction power, type of installation and kitchen design. For the best air removal performance, the hood must offer the **right extraction power**. Take a look at the size of your kitchen and your cooking habits. With a simple calculation, it is possible to define the ideal flow rate for each room: just multiply the room volume by 10. **Ease-of-use and silence** are another two important variables that will help you achieve the best user experience.

The **type of installation** is essential in narrowing the field and finding the category you need for your kitchen.
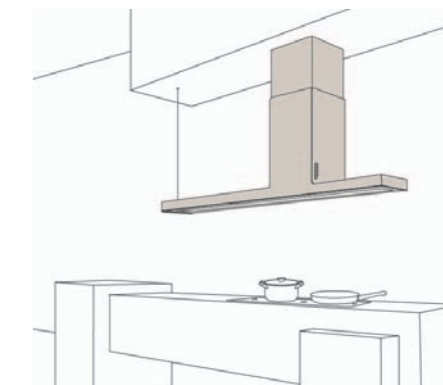

BUILT-IN
The hood is built into the cabinet, disappearing from view.

WALL-MOUNTED
The kitchen is positioned against the wall with the hob adjacent to the wall. Wall-mounted hood.

ISLAND
The kitchen is positioned in the centre of the room with the hob away from the wall. Ceiling-mounted hood.
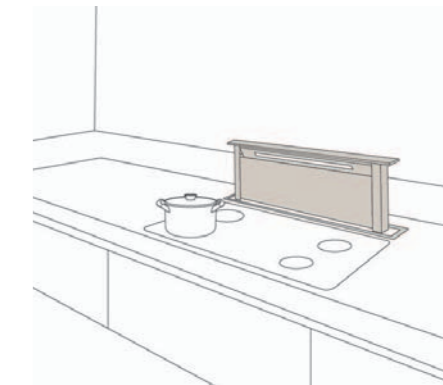

CORNER
The kitchen is laid out between two walls of the room and the hob is positioned close to the corner. Install the hood between adjacent walls.

CEILING
The kitchen is positioned either in the centre of the room or against the wall. The hood acts as both a light and extractor and is installed in the false ceiling.

DOWNDRAFT
The hob is positioned away from the wall, on a peninsula counter or in the centre of the room. Install the hood directly on the top.

THE IMPORTANCE OF THE HOOD IN THE KITCHEN

SUSPENDED
Install the hood on the ceiling, suspended like a pendant light.

EXTRACTOR HOB
The hood is integrated into the hob. Extraction from below

HOW IS IT INSTALLED?

Perfect hood operation is ensured by correct installation, guaranteed by specialised personnel. Assembly and maintenance vary according to the two types of hood: extractor and filter. Many Elica models are designed to work in both versions. Before starting installation of your hood, bear in mind these simple, basic rules:

• Follow all the steps indicated in the instruction booklet;

• For duct-out installations connect the extractor hood to the outside using a dedicated pipe with the correct diameter usually 150mm: the shorter length and the fewer the bends guarantee the better the performance and the quieter the hood will be.

• The main cause of a cooker hood not working correctly is faulty installation using either too small ducting or ducting that is too long or has multiple bends. The longer the duct and the more bends the more the airflow will be reduced and the noise level increased.

• Follow the minimum distance from the hob indicated in the installation guide that comes with it and the instructions provided by the hob manufacturer which may require a greater distance to avoid damage to the operational parts and protect personal safety.

• Ensure that the location of the electrical outlet is close to the product for connection;

• In case of difficulty, request the intervention of a specialised technician.

HOOD INSTALLED IN RE-CIRCULATING MODE
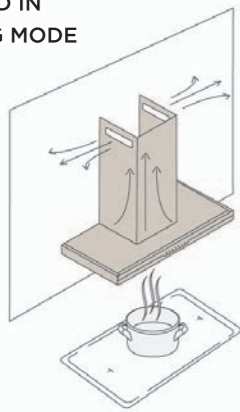

The filter hood eliminates fumes and unpleasant odours via dedicated filters and returns clean air to the kitchen. This type of hood is suitable in situations without no external evacuation hole.

HOOD INSTALLED IN DUCT-OUT MODE
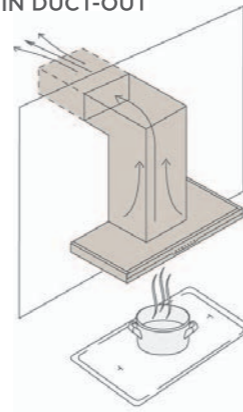

The extractor hood expels the air outside the home. It is the most common type as it guarantees high performance, high flow rate and minimum noise.

MAINTENANCE

To ensure that your hood lasts for a long time and continues to work correctly, the first step is to keep the filtering system in good condition.

Filter hoods feature two types of filter:

The **grease filter** which removes the grease from the air given off during cooking and the **odour filter**. Both must be regularly cleaned and replaced to ensure the very best performance.

• The grease filter protects your hood by trapping grease particles. The grease filter can be made of aluminium or stainless steel and requires periodic cleaning by hand with a neutral detergent or in the dishwasher at a low temperature (*).

• The odour filter with activated carbon, installed on filter hoods, captures and traps odour particles in the air. Remember to replace it every 3-4 months. Long-life odour filters, on the other hand, last longer. They can, in fact, be regenerated and washed, dried and replaced every 2-3 years. A few simple, minor precautions are all it takes to keep your hood hygienic and working efficient over time.

**(*) Always check how to wash the filter in the product instruction booklet**

ENERGY LABEL

The Energy Label constitutes a fundamental tool for choosing the most suitable extractor hood for the user's needs. The label provides instant information on energy consumption and the level of efficiency of the product's performances.

Each page of our catalogue contains a symbol indicating the energy class of the product presented.

For obtaining detailed information on each version of the desired model, including all the parameters appearing on the energy label, proceed as follows:

- Identify the **product code** of the relevant model

- Visit the website **www.elica.com** and go to the DOWNLOADS section of the ASSISTANCE page, insert the product code in the search field and download the PDF document (Product Fiche) listing all the product characteristics, as per EU regulations no. 65/2014 and 66/2014.
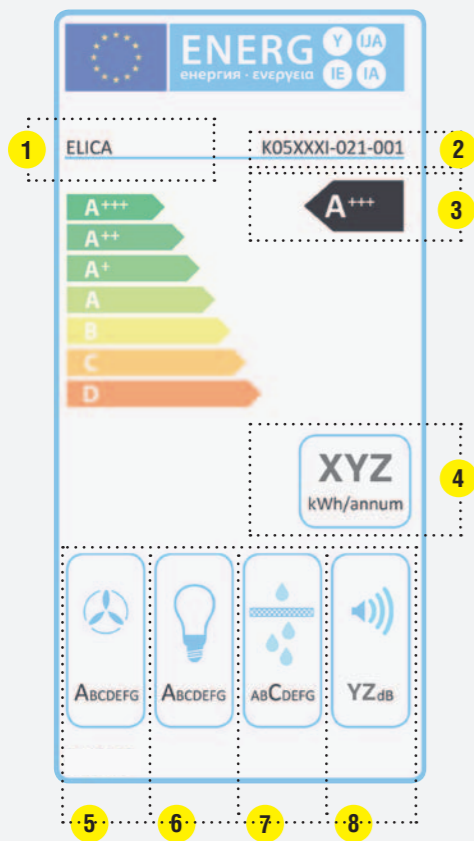

1 SUPPLIER NAME OR BRAND.

2 MODEL IDENTIFICATION CODE.

3 ENERGY EFFICIENCY CLASS
A/A+/A++/A+++ Maximum efficency - D Minimum.

4 ESTIMATED ANNUAL ENERGY CONSUMPTION
For standard use

5 FLUID DYNAMIC EFFICIENCY CLASS
Indicates the efficiency with which the hood is able to extract vapours through cooking
A Maximum efficency - G Minimum.

6 LIGHTING EFFICIENCY CLASS
Indicates the efficiency with which the hood is able to illuminate the cooker hob
A Maximum efficency - G Minimum.

7 GREASE FILTERING EFFICIENCY CLASS
Indicates the efficiency with which the hood filters grease generated through cooking
A Maximum efficency - G Minimum.

8 NOISE LEVEL
Indicates the maximum noise level generated by the product during normal use
